Materials Control Procedures for Recipes & Micros Stock Reduction.

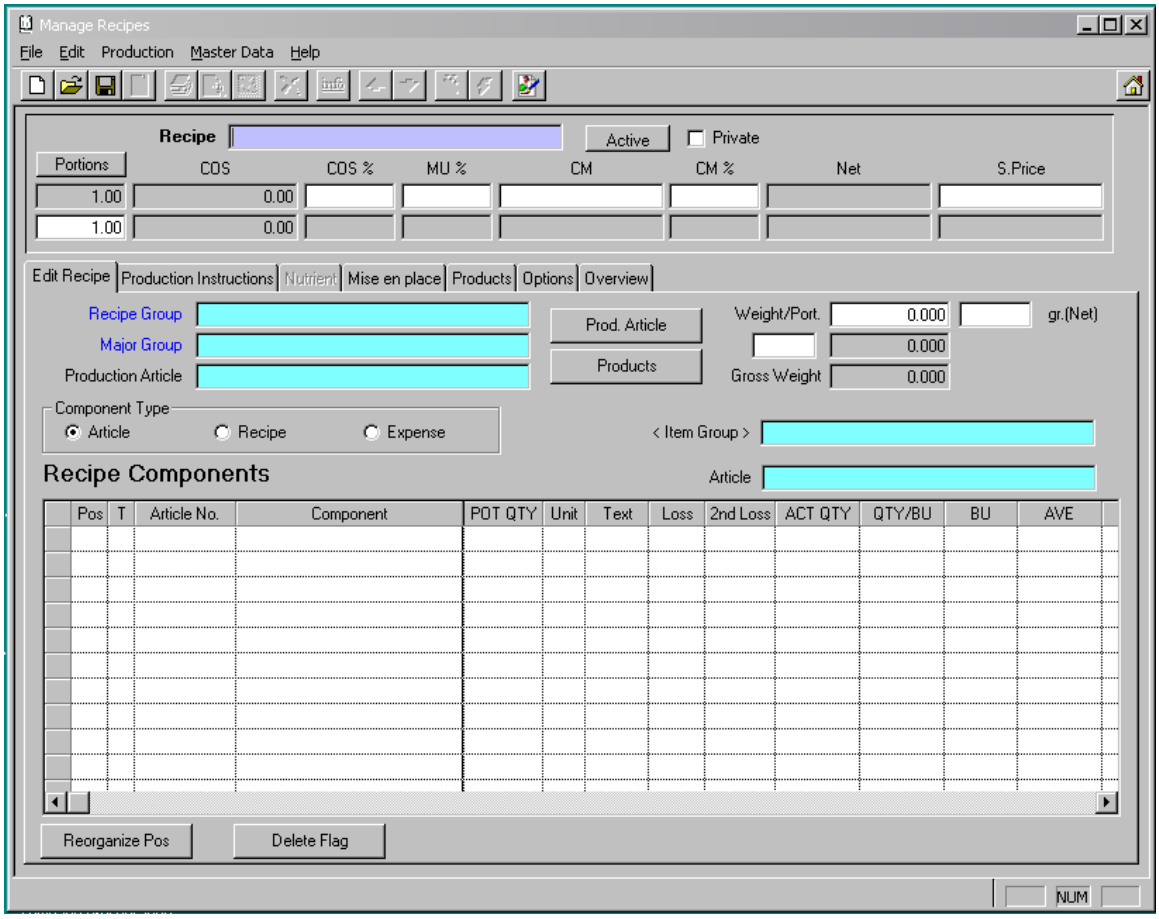

This document is meant for giving procedures on how to create base recipes, conversion articles, actual recipes for Micros sales items, importing new sales items created in Micros and for Micros stock reduction.

Recipes

Click on 'Recipes' icon under the Production short-cut bar.

The following blank screen appears:

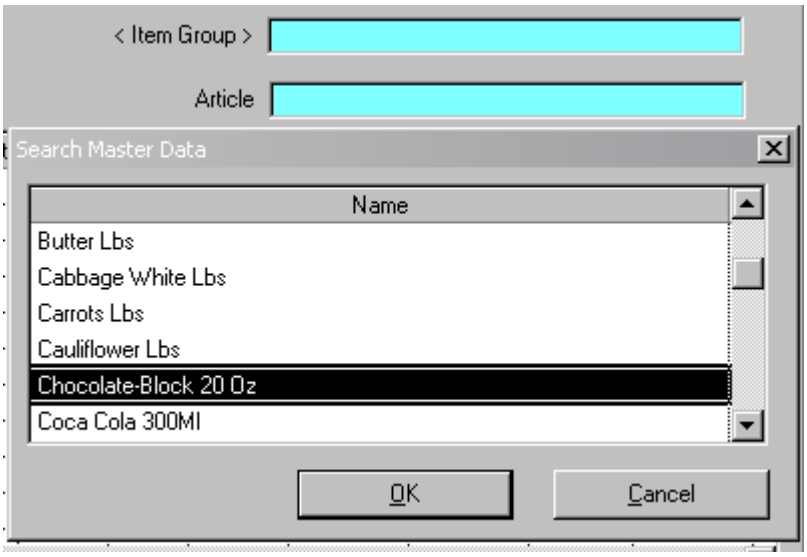

For creating base recipes:

These are sub-recipes that are used along with other recipes or ingredients that are used to make up a sales product.
Please note that these items will not appear at all in the Micros item list.

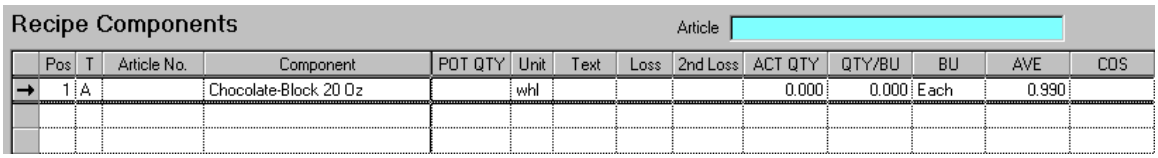

- In the 'Recipe' field type the name of the base recipe and press Tab
- In the Recipe Group field press Enter and Select the appropriate recipe group to which this recipe should be classified
- In the Major Group field press Enter and Select the major group to which this recipe belongs. E.g. Micros POS Food, Micros POS Beverage etc
- In the Component Type section, click in the 'Article' radial button

- In the 'Article' field press Enter and select the first article that is used to make up this base recipe.

The article selected appears in the following window:

	Pos	T	Article No.	Component	POT QTY	Unit	Text	Loss	2nd Loss	ACT QTY	QTY/BU	BU	AVE	COS
→	1	A		Chocolate-Block 20 Oz		whl				0.000	0.000	Each	0.990	

- In the 'POT QTY' column insert the quantity that is to be used up in the process of making this recipe.
  Please make sure this quantity is relative to the Unit selected in the next column

- In the 'Unit' column select the respective unit from the drop-down list.
  Please make sure this quantity is in respect to the quantity inserted in the previous column.

- Select the next article to be used in the process of making this base recipe by following the above procedure.

- Click on the Save icon at the top. 

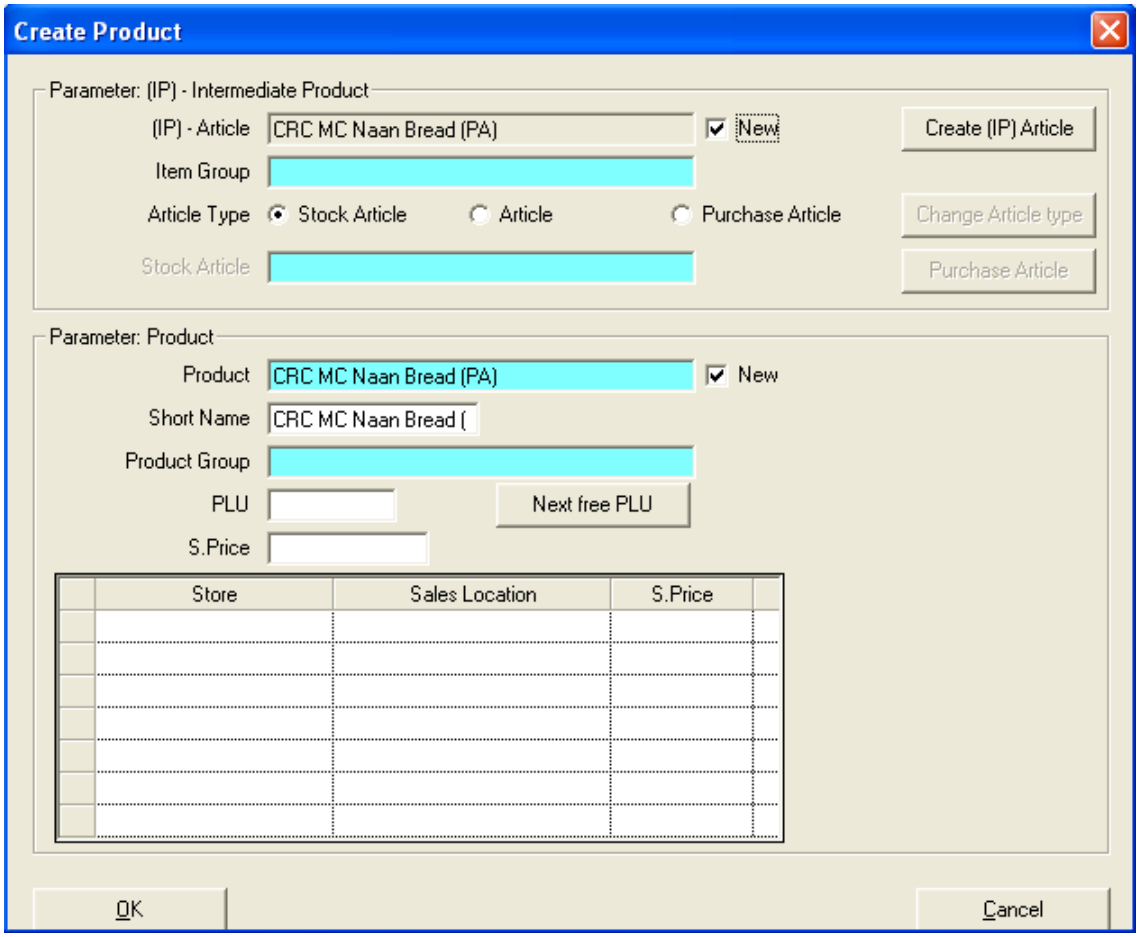

Please Note:
If you want to enable other outlets/ departments or stores to be able to directly order for this base recipe then you have to make it into an Intermediary Product. The Procedures are:

After creating and saving the base recipe,

Click on '**Prod. Article**' 

on this same window (*as the one on the 1st page of this document)*

The following window appears:

- Press Enter and select an appropriate Item Group from the list to group this Intermediate Product.
- Click on '**Create [IP] Article**' 

- Click on '**Cancel**' 

to close this window
- Click on the Save icon at the top . 

Creating Recipes.

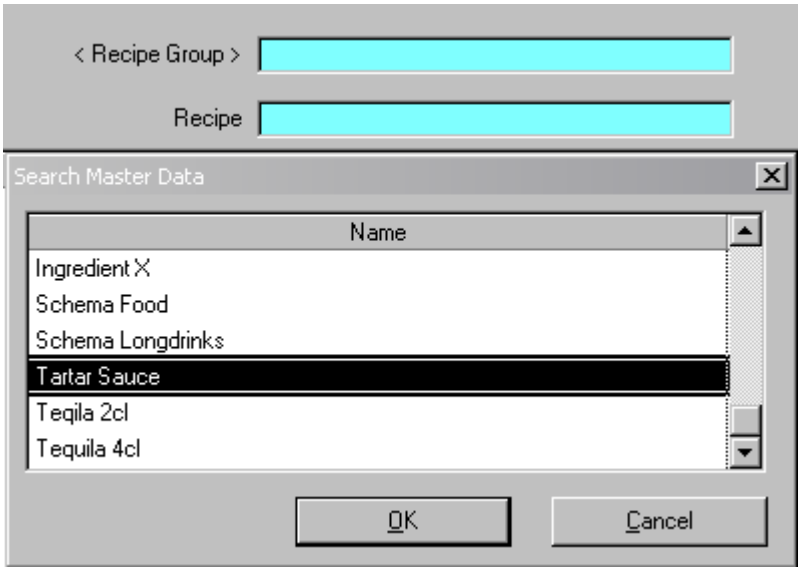

This is for creating the recipes of all those items sold via the Micros POS'

- In the 'Recipe' field press Enter and select a Sales item to create the recipe
- In the Recipe Group field press Enter and Select the appropriate recipe group to which this recipe should be classified
- In the Major Group field press Enter and Select the major group to which this recipe belongs.
- In the Component Type section,
    - select the 'Article' radial button to insert an article that is stocked
    - select the 'Recipe' radial button to insert a base recipe (created as above)
    - select the 'Expense' to include / allocate an expense cost to the sales item

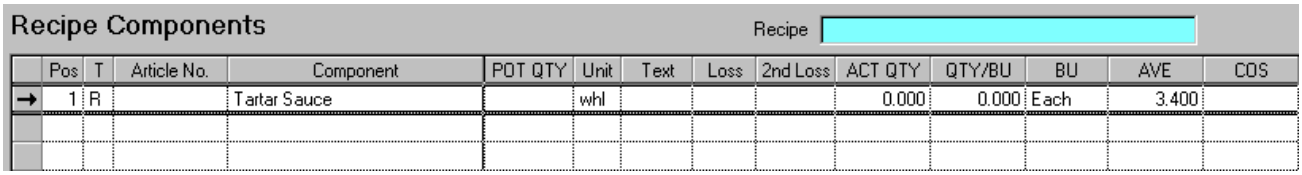

Whichever is selected the procedure remains the same.

- In the 'Article / Recipe / Expense' field press Enter and select the first item that is used to produce this sales product.

The article / base recipe / expense item selected appears in the following window:

- In the 'POT QTY' column insert the quantity of this item that is used up in the process of making this sales product.
  Please make sure this quantity is relative to the Unit selected in the next column

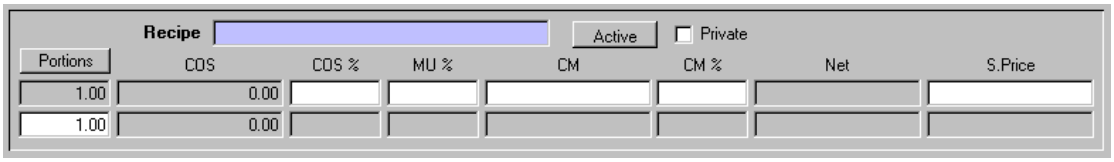

- In the 'Unit' column select the respective unit from the drop-down list . Please make sure this quantity is in respect to the quantity inserted in the previous column.

- Select the next article / recipe / expense item to be included in the process of making this sales product by clicking in the 'Article / Recipe / Expense' field *(Depending on the Component Type chosen i.e Article or Recipe or Expense)* and follow the above procedure.

- When finished click on the Save icon at the top  .

PLEASE TAKE NOTE OF THE FOLLOWING SECTION AT THE TOP OF THE SCREEN.

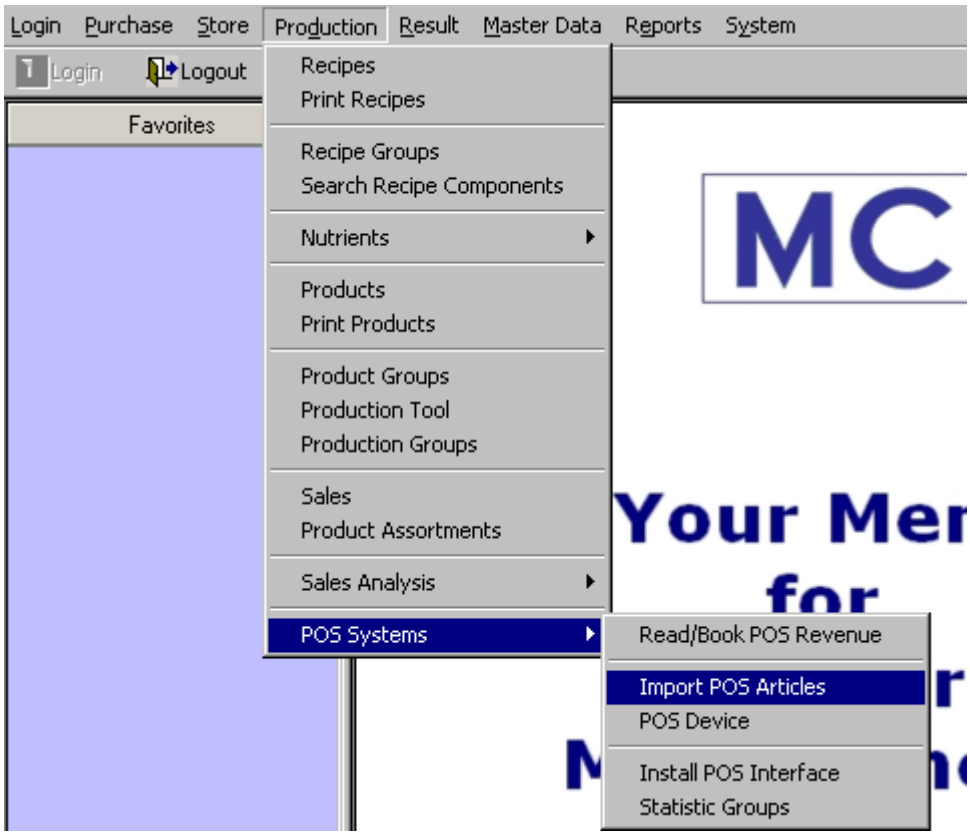

The COS Field is the cost of recipes inserted, It is calculated automatically from the quantities and the nett costs of the articles in the recipe.
Please use this to verify your recipe creation i.e. the cost of sale has to be less than the sales price.

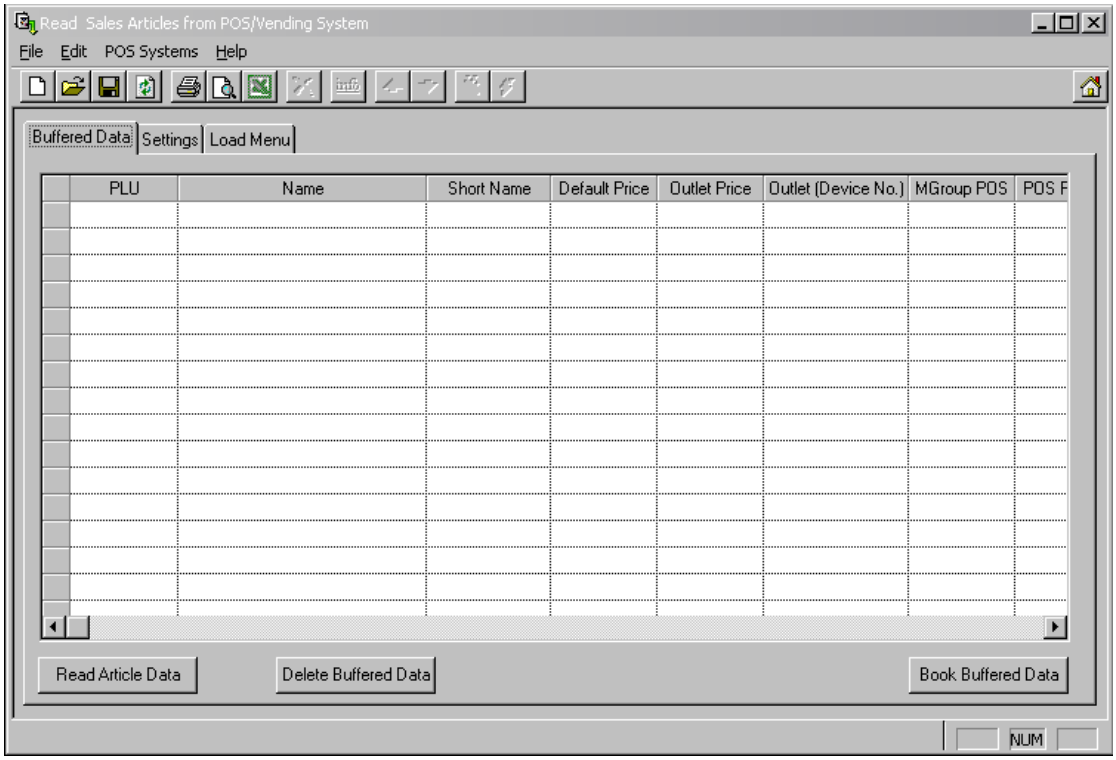

Micros Sales Products Import from Micros POS' into Materials Control

This is used whenever a new sales item is created in the Micros POS systems.
PLEASE NOTE THAT NEW SALES ITEMS ARE NOT CREATED IN MATERIALS CONTROL.

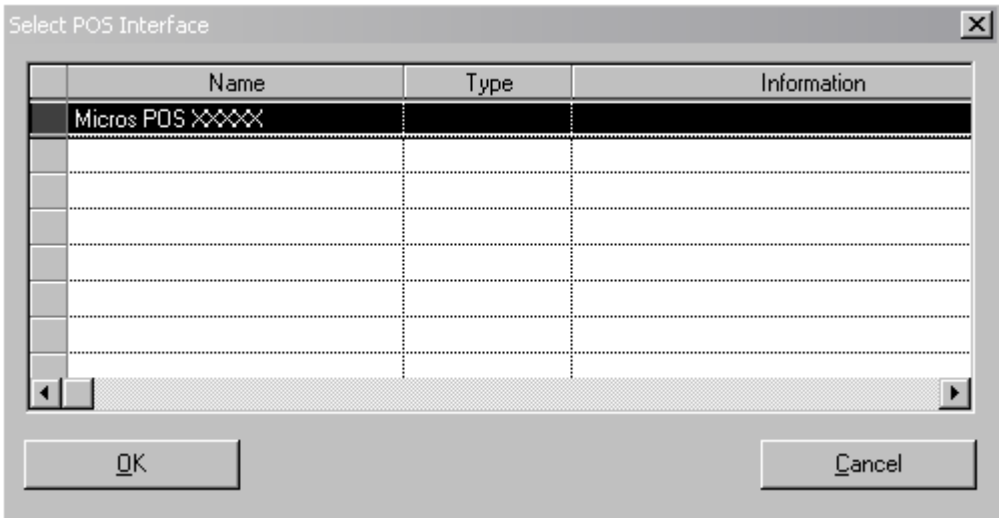

Click on the ‘Production’ Menu option at the top of the screen.
Scroll down to ‘POS Systems’ and then to select ‘Import POS Articles’

The following screen appears:

- Click on 'Read Article Data'
  The following screen will appear, highlight the interface (the first line in the window) and click 'OK' as below:

The process runs, when finished a message "Import Successful" is displayed. Click OK.

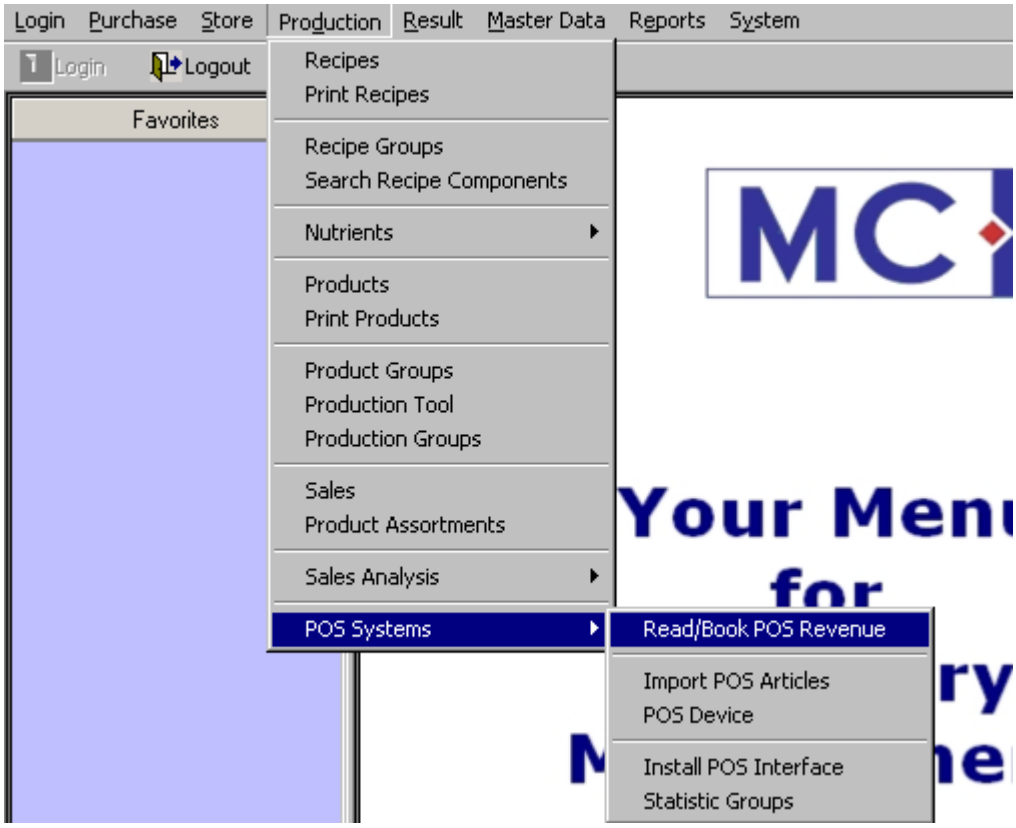

The same screen as the 1st one above is displayed with all the Micros POS's sales items.

Click on 'Book Buffered Data'

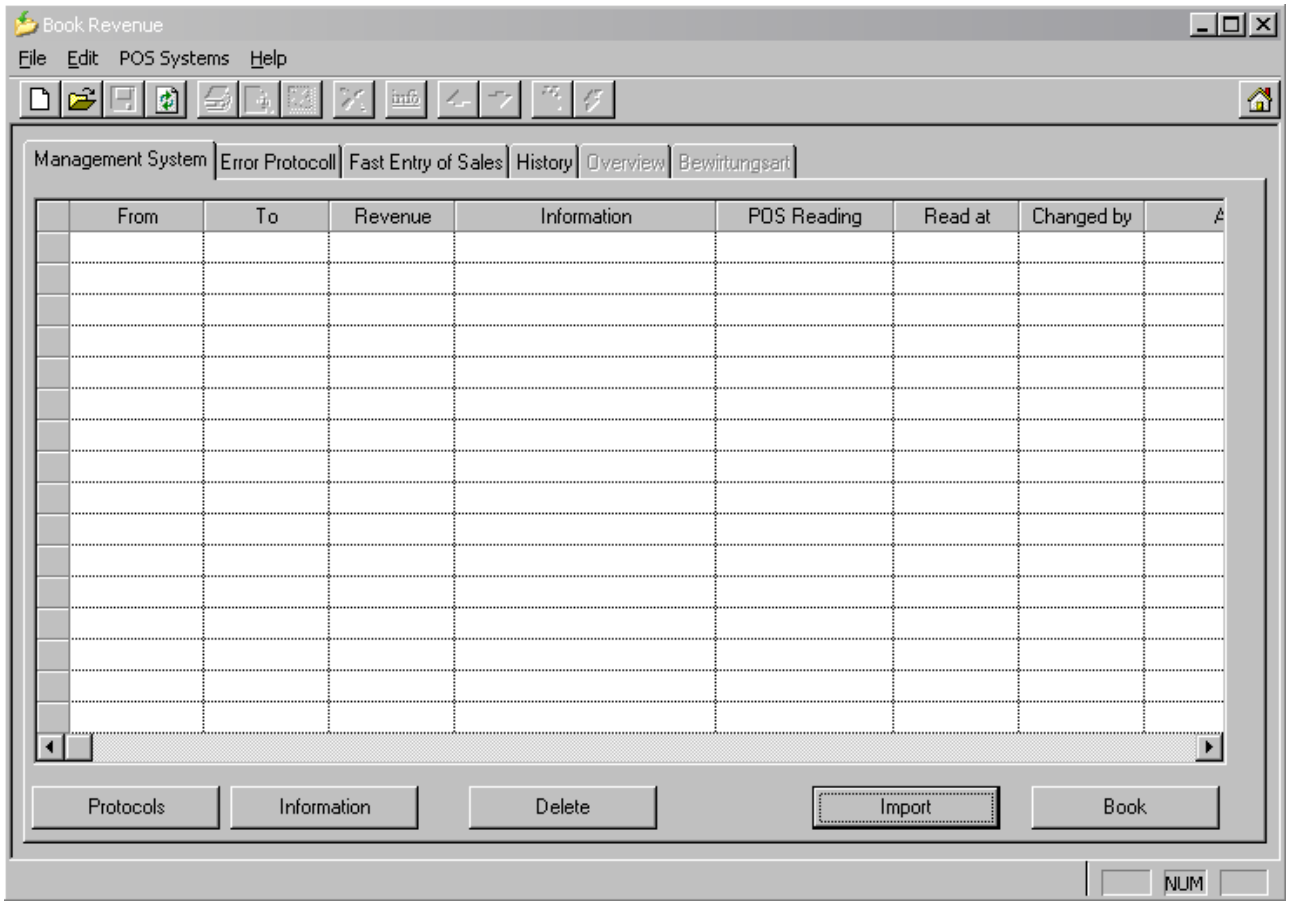

Micros Stock Reduction.

This is used daily for stock reduction from Micros POS systems and for sales information. Please note that a Micros End-of-Day procedure has to have been done before an import can be done.

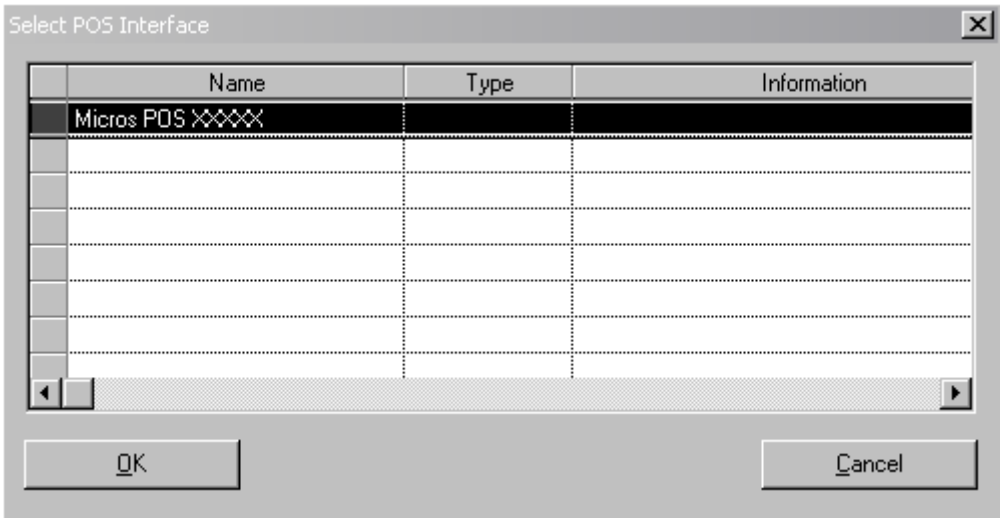

Click on the ‘Production’ Menu option at the top of the screen.
Scroll down to ‘POS Systems’ and then to select ‘Import POS Data’

The following screen appears:

- Click on ‘Import’
  The following screen will appear, highlight the interface (the first line in the window) and click ‘OK’ as below:

The process runs, when finished a message “Import Successful” is displayed. Click OK.

The same screen, as the 1st one on the previous page, is displayed with all the Micros POS’s sales data for the previous day.

- Click ‘Book’.
