The following window appears, wait until the installation is complete.

Once the scale above has reached 100%, the installation of Materials Control is complete. Restart the computer.

NB : Materials Control will NOT RUN until the following procedures are completed.

Materials Control Configuration files and Report formats

Once the Materials Control program has been installed, some configuration settings have to be made. To simplify this, the configuration settings can be copied from the server to the local computer.

These files are

- **FMLOGIN.INI**
- **SQL.INI**
- **ETC.DLL**

The following folders also have to be copied

- **QRP_ENG ***
- **RPT_ENG ***
- **INTERFACE**

These files and folders can be found on the server on a shared folder or they can be copied from any other computer (including the server) from the path where Materials Control has been installed.

Descriptions of the files above:

FMLOGIN.INI
This contains the connection details to the database

SQL.INI
This contains the connection details to the Server

ETC.DLL
This is the license for Materials Control

Descriptions of the folders above:

QRP_ENG
This folder contains report formats such as Purchase Orders, Goods Received Note, Internal Requisitions etc formatted to the Hotel's requirements.
These are Centura reports and can be amended by Centura Report Builder software.

RPT_ENG FOLDER
This folder contains all the custom reports such as various purchase reports, stores reports, cost reports etc.
These reports can be amended by Crystal Report Builder program.

INTERFACE
This folder contains the back-office interface settings.

Once the above files and folders have been copied to the local computer then Materials Control will run successfully.

NB : Please ensure these files are standard on all computers at all times. Have a backup of all these files
