Cost center/Stores

Description

This is where stores, outlets and departments are created and configured in the system.
T-Codes are also mapped here.

There are 3 types of cost centres/ stores:

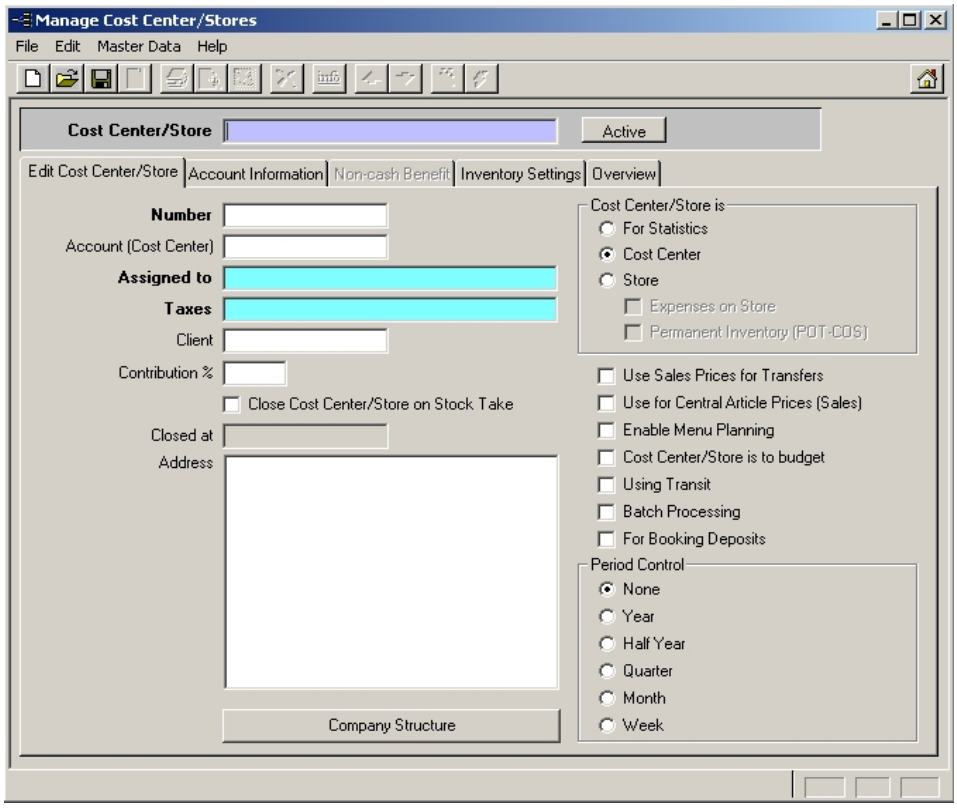

1. **For Statistics** – only used to group sub-stores. Statistics stores do not contain inventory and cannot be used for any transactions.

2. **Cost centers** – these are cost centres where any receipt of goods are considered consumed on receipt. All departments and outlets are created in the system as cost centres.

3. **Stores** – these are physical stores that hold inventory (main store, etc.)

Click on the Cost Centre/ Store icon 

The following window appears:

- **Cost Center/Store** – To access an existing cost centre/ store, press **Enter** and select it.

  To create a new cost centre/ store, type it's name in this field, DO NOT PRESS ENTER WHEN CREATING A NEW COST CENTRE/ STORE

- **Number**– A quick reference number for this cost centre/ store can be entered here.

- **Assigned to** – Press Enter and select the cost centre/ store that this store should be grouped under.

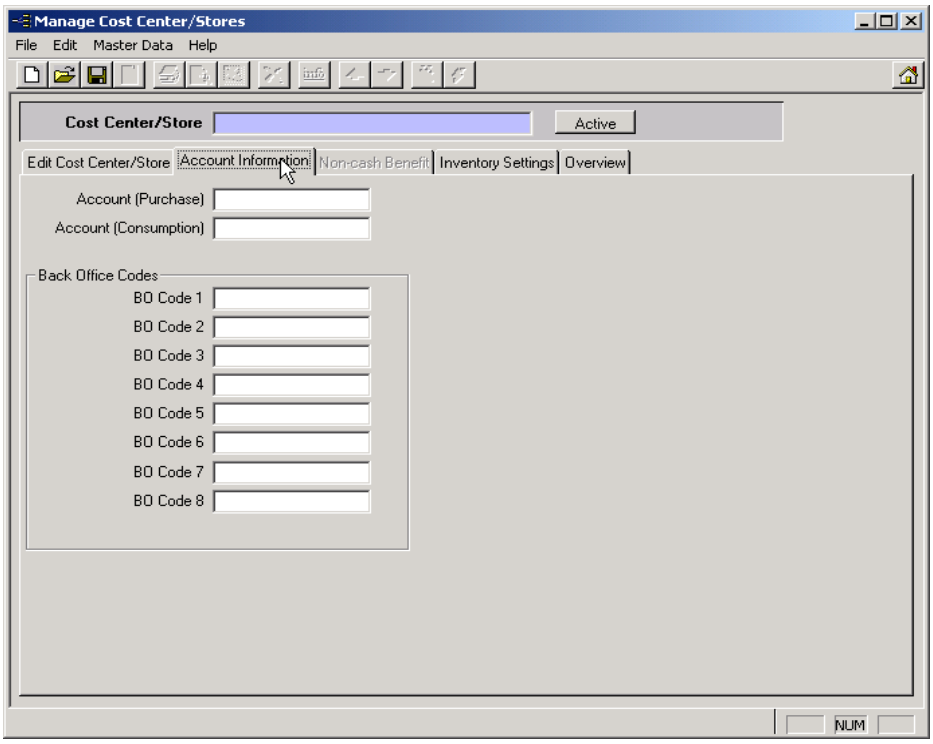

- **Taxes** – Click on this field and press enter to display a list box of tax types. Select the appropriate tax type for the cost center/store.

- **Cost Center/Store is** – Select the appropriate cost centre/ store type (*statistical, cost centre or store*)

Account Information Tab_

This is where T-Codes are attached.

Enter the appropriate T-Codes in the fields BO Code 1, BO Code 2, BO Code 3 ……..etc only as required.

- **Unit** – Enter the name of the unit.
- **Order name** –This name is used on order forms.
- **Consists of –** Enter the quantity that constitutes this unit or enter the quantity of other smaller units that constitute this unit.

Item groups

Description

This is where item groups are created and Back-Office mapping done.

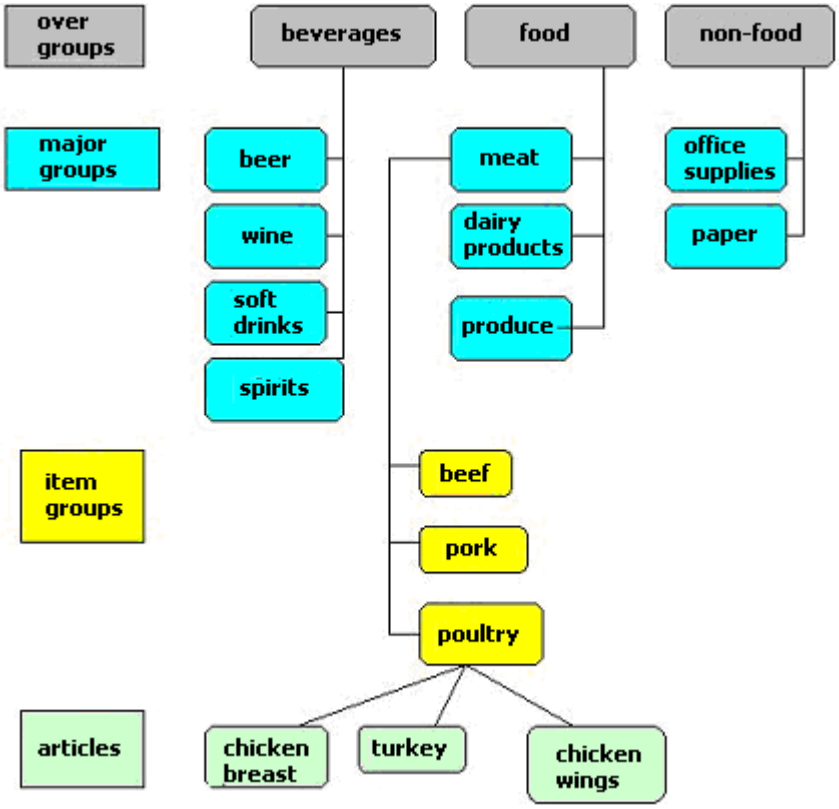

Important

Please note that Materials Control follows the following hierarchy of classification

- Over Groups
- Major Groups
- Item Groups
- Article

Example

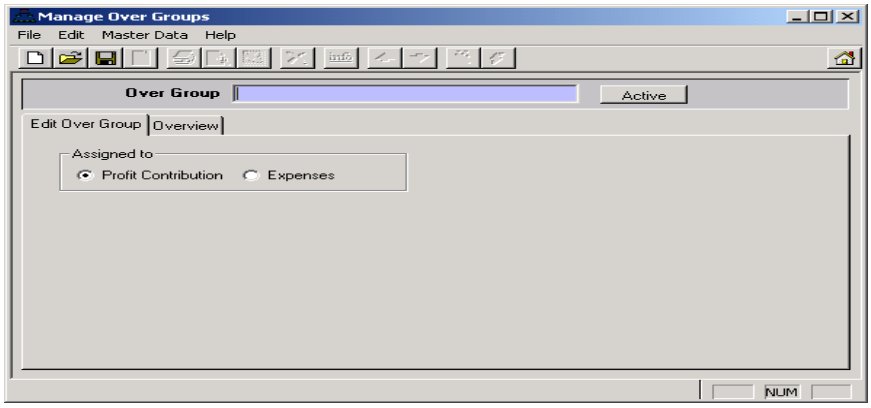

Over Group – Major Group – Item Group - Article

Over groups

Click on the Over Groups icon 

The following window appears:

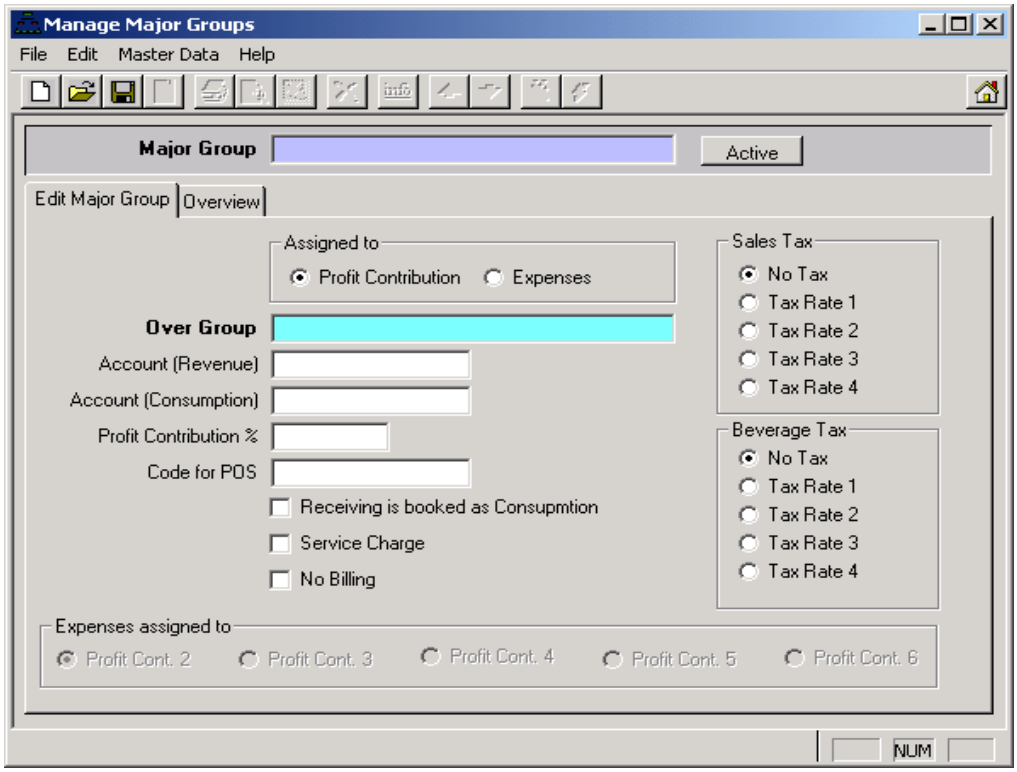

- **Over Group** – Press Enter and select the name of the over group.
- **Assigned to Profit Contribution/Expenses** – These options determine whether the group belongs to profit contribution or expenses. If you link this over group to Profit Contribution, it will be used to calculate Profit Margin 1. If you link this over group to Expenses, it will be used to calculate expenses.

Major Groups

Click on the Major Groups icon 

The following window appears:

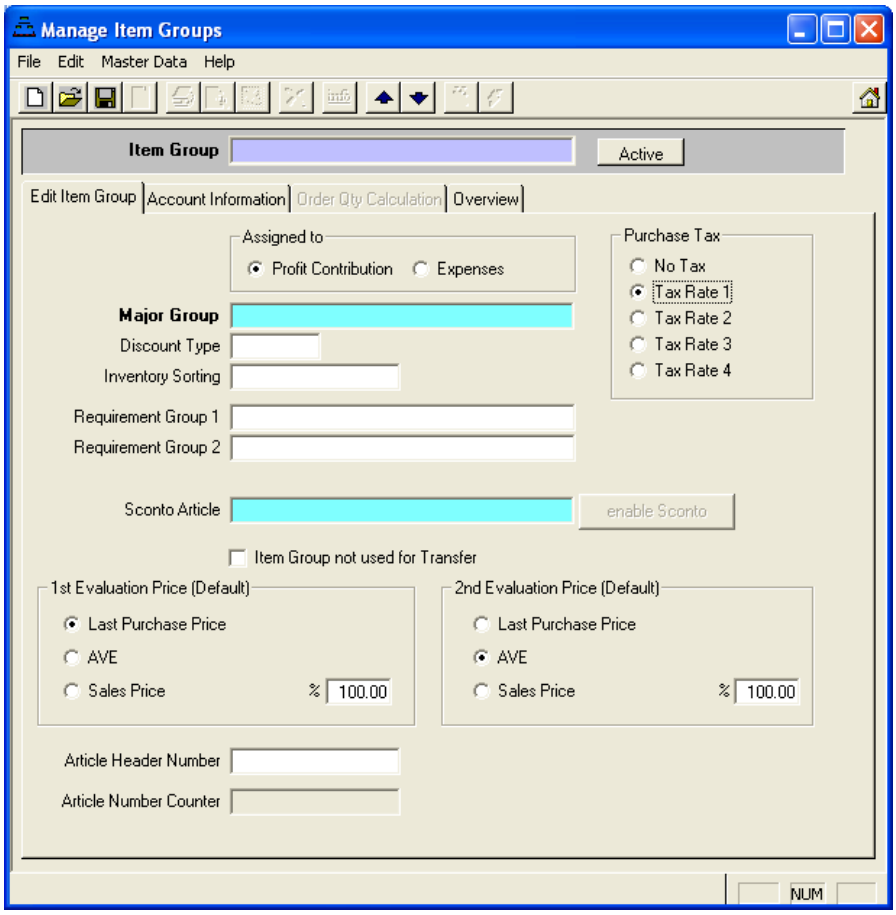

- **Major Group** – Press Enter and select the name of the major group
- **Assigned to** – Select the type of assignment. This selection will determine the range of over groups in the next field.
- **Over Group** – Select this major group's over group
- **Code for POS** – If creating a Major Group for Micros POS System Enter the corresponding code

Item groups

Click on the Item Groups icon 

The following window appears:

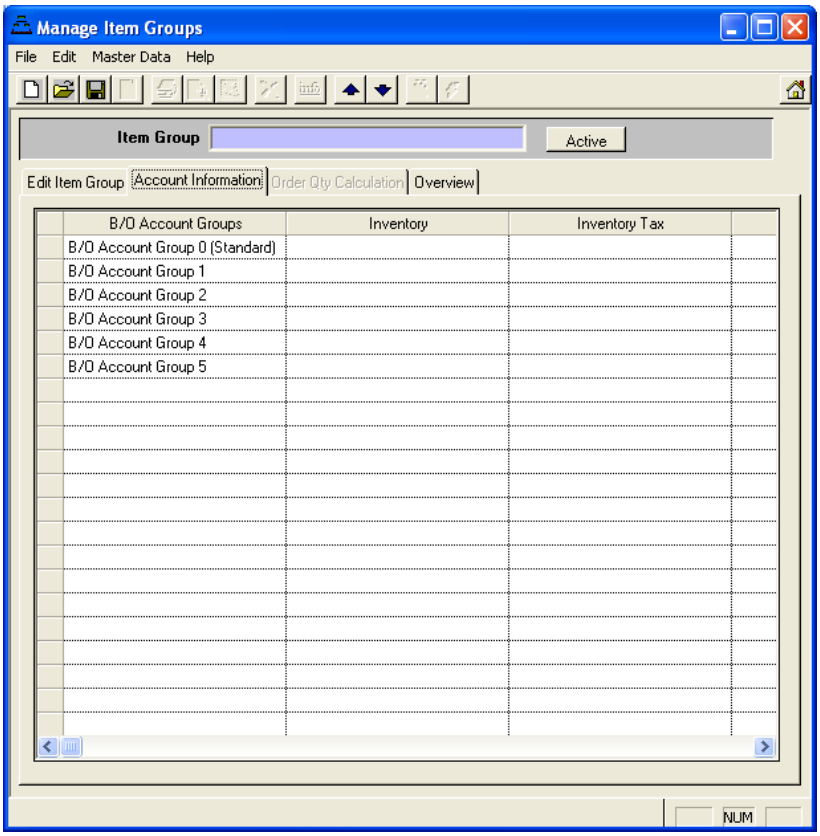

- **Item Group** – Enter a name for the item group into this field.
- **Assigned to –** Select the type of assignment. Your selection here will determine the selection from the Major Group field.
- **Major Group –** Select the major group for this item group
- **Purchase Tax –** This is where the default VAT setting is enabled/ disabled.

Articles

Description

All articles to be used in the system, including services, need to be created in the system.

Click on the Articles icon 

The following window appears:

Article – Enter the name of the article (article description including the packing).

- **Assigned to** – Select the type of assignment. This selection determines the range of item groups available to classify this article.
- **Article No.** – Internal article number. It is possible to automatically roll out these numbers as new articles are created.
- **Item group** –Press Enter and select the appropriate item group to group this article.

Base Unit – Press Enter and select the basic unit of measure.
It is advised to use "**Each**"

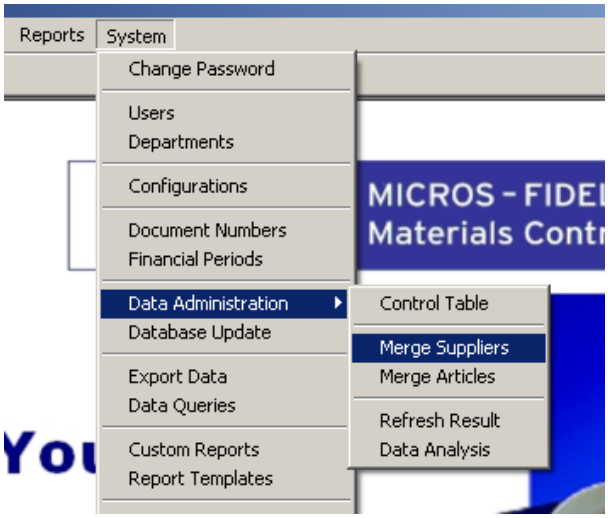

Data Administration

Merge suppliers

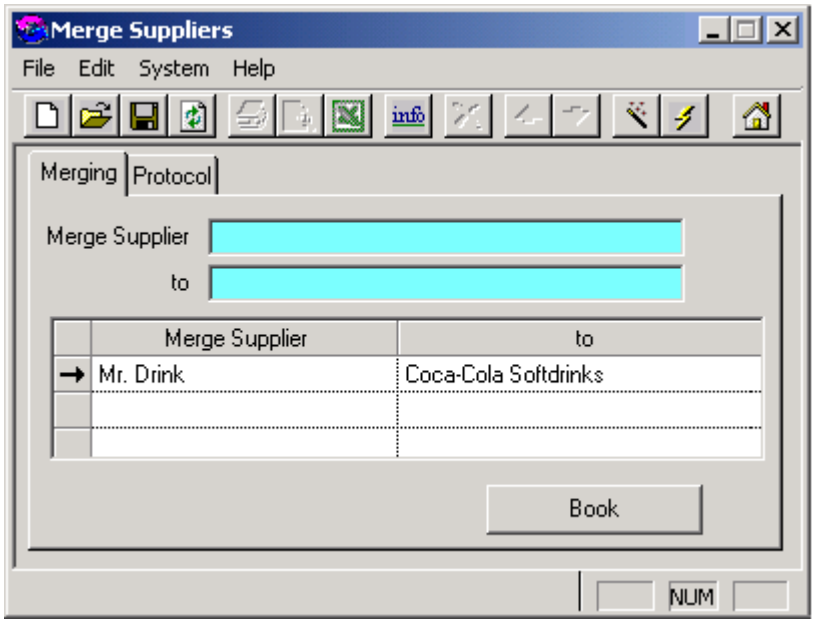

Description

When suppliers are duplicated or need to be combined into one supplier, they need to be merged in the system.
Using Merge Suppliers, you can merge two suppliers' transactions so that their transaction history is only found in one of the supplier's records.

Access the Merge Suppliers function as follows

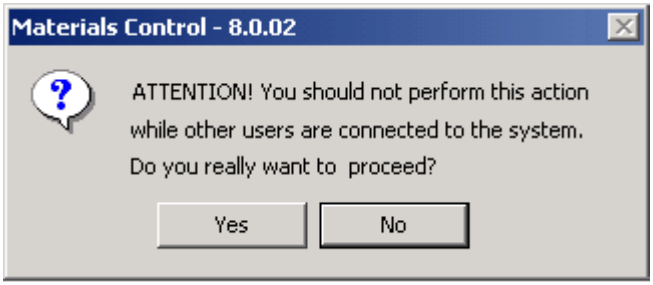

The following window appears:

- **Merge Supplier** – Press Enter and select the supplier that you do not want displayed in the system any more
- **To** – Press Enter and select the supplier that should remain in the system.
- **Book** – Click on this button to execute the merge.

When you click on the Book button Book to merge suppliers, the following message l displays:

Make sure no other users are connected to the system before clicking Yes.

Once you have clicked on the Yes button Yes, the source supplier's data is merged with the destination supplier's data. This process is irreversible.

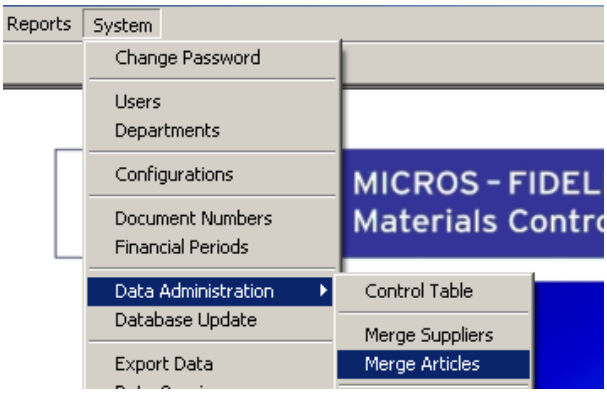

Merge articles

Description

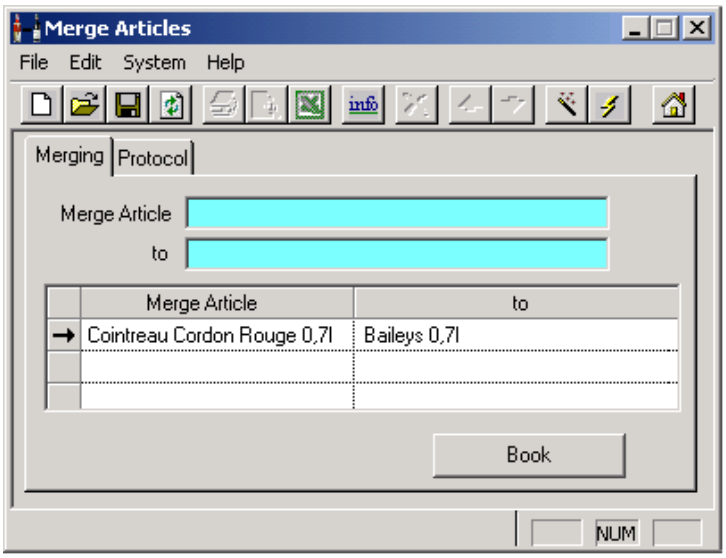

Once an article has been posted in the system, it cannot be deleted anymore.

If an article has been duplicated, they can be merged so that the history is still available in the system.

Access the Merge Articles function as follows

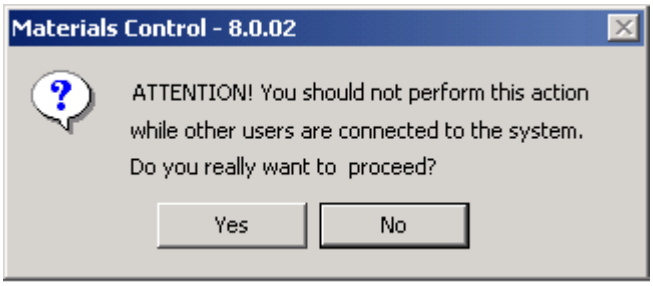

The following window appears:

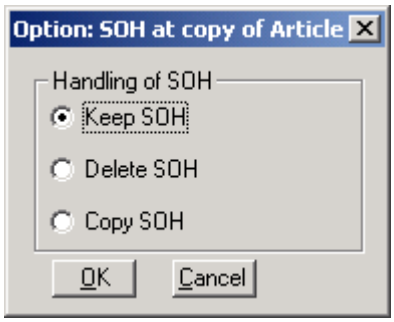

- **Merge Supplier** – Press Enter and select the article that you do not want displayed in the system any more
- **To** –Press Enter and select the article that should remain in the system.
- **Book** – Click on this button to execute the merge.

When you click on the Book button Book to merge articles, the following message displays:

Make sure no other users are connected to the system before clicking Yes.

Once you have clicked on the Yes button Yes, another window displays:

- **Keep SOH** – Keeps the source's stock on hand as well as the destination's stock on hand
- **Delete SOH** – Deletes the source's stock on hand
- **Copy SOH –** Copies the source's stock on hand to the destination
